

POND
AN
ALMANACK

for the year of our
LORD GOD

1674.

Being the second, after Bissextile or Leap-
year, and from the Worlds Creation at the
Spring 5677 Years Complicat.

Amplified with many good things both
for pleasure and profit: and fixed for the
Meridian of *Saffron-Walden* in *Essex*,
where the Pole is elevated 52 degrees and
6 minutes above the Horizon.

And may indifferently serve any other
place of this Kingdom.

CAMBRIDGE
Printed by *J. Streater* Printer to the
University, 1674.

Common Notes and Moveable Feasts for this year 1674;

T he Golden Number is	3
The Cycle of the Sun	3
The Epact	3
The Dominical Letter	D
Shrove-sunday	March 1
Easter-day	April 19
Ascension-day	May 28
Whitsunday	June 7
Trinity-sunday	June 14
Advent-sunday	Novemb. 19

THe welcome and delightfull Spring beginneth when the Sun enters Aries, but the earth Libra, which will be this year March the 10 day at 4 of the clock in the morning, this season represents the youthfull State of man, and is naturally hot and moyst.

The summer quarter beginneth at the Suns entrance into Cancer, or the earth Capricorn, which will be the 11 day of June at 7 of the clock in the morning, this season represents the full growth, or flourishing state of man, and is naturally hot and dry.

The autumnal quarter begins at the Suns entrance into Libra, or the earth Aries, which will be September the 12 at 11 at night, this season represents the declining age of man, and is naturally cold and dry.

The winter quarter begins December 11 day at 10 beforenoon, at which time the sun enters Capricorn, or the earth Cancer, this quarter represents the old age, and end of man, and is naturally cold and moist.

The

Pond 1674.

The beginning and ending of the Terms this year.

Hilary Term begins January 23, ends February 12.

Easter Term begins May 6, ends June 1.

Trinity Term begins June 19, ends July 8.

Michaelmas Term begins October 23, ends Nov. 28.

Times prohibiting Marriage.

MArriage comes in on the 13 of *January*, and by *Septuagesima* it is out again until Low-sunday; at which time it comes in again, and goes no more out till Rogation-sunday: from whence it is forbidden again until Trinity-sunday; and from thence it is unforbidden till Advent-sunday. But then it is out, and comes not in again until *S. Hilary* which is on the 13 day of *January* next after.

THe glorious planet *Venus*, is our bright morning star from the beginning of the year to the 12 of April, at which time she is in Conjunction with the sun, and from thenceforth becomes Occidental, or our evening star, till the 27 of January 1675.

Jupiter is likewise a morning star till the 23 of April, and from thence an evening star to the 10 of November.

Mars is a morning star from the beginning of the year till the beginning of November, and after that an evening star to the 16 of October 1675.

A 2

January

January hath xxxi days.

First quarter the 5 day, at 7 in the morning.

Full moon the 12 day, at 6 in the morning.

Last quarter the 18 day, at 10 at night.

New moon the 26 day, at 9 at night.

Ursa Minor, or the lesser Bear is the nearest Constellation to the North-pole. *Saturn* having received of the Oracle that one of his sons should banish him out of his Kingdom, determined to kill all his male children, but *Ops* his wife being soon after delivered of *Jupiter* (to save his life) put him to nurse to two Nymphs of *Crete* whereof the lesser Bear was one. *Jupiter* for their good service translated them both to heaven.

January 1674.

1 Windy with
2 snow or rain
3 at the begin-
4 ning.
5 Milder but
6 cold frosty
7 weather
8 about the 12
9 day.
10 Eclipsed
11 to be seen
12 with us.
13
14
15 Pleasant
16 weather
17 for the time
18 of the year.
19
20 Very cold
21 with frost
22 at this time.
23
24
25 Temperate
26 with wholso,
27 winds.
28
29 Towards the
30 end cloudy if
31 not snow.

The last year I gave you an account of the Poets fictions upon the Zodical Constellations, this year you have the same upon 12 of the Northern Constellations.

The 12 day at 6 in the morning the Moon will be Eclipsed to be seen with us at *Walden*, if clouds hinder not.

Sun Eclipsed the 26 day, but not visible with us.

February hath xxviii days.

First quarter the 3 day, at 10 at night.

Full Moon the 10 day, at 4 afternoon.

Last quarter the 17 day, at noon.

New moon the 25 day, at 3 afternoon.

Ursa Major or the greater Bear, (called by us *Charles wayn*) was placed in heaven with the former Constellation by *Jupiter*, upon the same account. If any wonder that a Bear should have so long a tail, let him imagine that *Jupiter* (fearing her teeth) drew her to heaven by the tail, and the distance being great, and her body heavy caused her tail to stretch,

February 1674.

Seasonable
at the begin-
ning of the
moneth.
Cold frosty
weath. about
this time.

Windy and
stormy these
days.

Warm for the
time of the
year.

Colder with
snow or rain.
Pleasant
weather for
seed time to-
wards the end.

On the 14 day is placed *S. Valentine* he was Priest and Martyr, and suffered under *Claudius* the Emperour Anno 271, for not worshipping the heathen Gods, it is a custom on this day for men and women (as taught by the custom of Birds) to chuse their mates for the ensuing year, and to give them presents; as thinking this *Valentine* to be the Author of the fancy.

March hath xxxi days.

First quarter the 5 day, at 10 before noon.

Full moon the 12 day, at 2 in the morning.

Last quarter the 19 day, at 3 in the morning.

New moon the 27 day, at 8 in the morning.

Draco or the Dragon containeth 31 stars, the Poets say this was the Dragon that kept the Golden Apples in the Orchard of the Hesperides, and for his diligence was translated into heaven. Others say when *Minerva* withstood the Gyants fighting against the Gods; they to terrifie her, threw at her a mighty Dragon, but she catching him in her hands threw him presently up to heaven, and placed him there for a memorial of her resistance.

Upon the 23 day is placed *S. George* the Patron of *England*, though some question whether there were any such man; but more whether he were a Christian and Martyr; such I refer to the learned labours of *D^r Heylin* concerning him. I find he was not onely a Christian, but suffered Martyrdom for the same, the 23 of April, Anno 290.

May hath xxxi days.

First quarter the 2 day, at midnight.

Full moon the 9 day, at 9 at night

Last quarter the 17 day, at 3 afternoon.

New moon the 25 day, at 9 in the morning.

Engonasis, is represented under the shape of a man kneeling upon one knee, it containeth 29 stars. The Poets say it is *Hercules*, and tell the tale thus, when the Tytans fought against the gods, for fear of the Gyant, they ran all to one side of the Heaven, whereupon the Heaven was like to fall, had not *Hercules* set his neck to it and stayed it, for which desert he was placed in Heaven.

Lyra, or the Harp, containeth 10 stars, the Poets say it is the Harp which *Mercury* gave unto *Orpheus*, which was of such excellent sound, that trees, stones, fowls, and wild beasts are said to follow the sound thereof: wherefore the Muses by the good leave of *Jupiter*, and at the request of *Apollo*, placed this Harp in Heaven. *Novidius* saith it is the Harp of *David*, by which he pacified the evil spirit of *Saul*.

Sun-rising.

Sun-setting.

Cygnus or the Swan, hath in it 17 stars, the Poets fable that *Jupiter* being in love with *Leda*, and knowing no honest way to accomplish his desire, procured *Venus* to turn her self into an Eagle, and himself he turned into the shape of a Swan, and by this means enjoying of his pleasure under that form, in memorial thereof he caused the Swan to be placed among the Stars.

Cassiopeia consisteth of 13 stars, she was the wife of *Cepheus*, and mother of *Andromeda*, whom *Perseus* married, and for his sake was translated into Heaven, others say that her beauty being singular, she grew so proud that she preferred her self before the Nymphs of the sea, for which cause, and for an example to all that are proud, she was placed in the Heaven with her head downward.

Auriga, or the waggoner containeth 14 stars; this they say was *Erichonius* the son of *Vulcane*. King of *Athens*, who having deformed feet, devised first the use of the Waggon or Chariot, to the end that he sitting therein might the better conceal his deformities, for which his invention *Jupiter* translated him into heaven.

The foregoing Tables explained.

THe former Tables perfectly shew the Break of Day, Sun-rising, length of the day, length of the night, setting of the Sun, with continuance of twilight, for the whole year, for the latitude of 52 Degrees, 40 minutes, the use is thus,

In the first, or last Columns, find the moneth, and in the next to them the day, in the which you would know any thing contained in the Tables, if you cannot find the day take the nearest unto it, and right against the same you have the hour and minute of all, under their proper Titles; onely take notice, that the first part of the Table serves for the summer half year, namely from the 10 of *March* to the 13 of *September*, and the last part from the 13 of *September* to the 10 of *March*: but to make it plain I shall add one example.

The 6 of *April* I desire to know the time of the day-breaking, sun-rising, and the rest. I find *April* in the first Column, and in the second the 6 day, and right against the same, under the Column of day-breaking, 2, 42, which sheweth the day breaketh at 2 of the Clock and 42 minutes, in the next 5, 4, which sheweth the sun riseth 4 minutes past 5 in the third is 13 hours 52 minutes the length of the day, in the fourth 10 hours 8 minutes, the length of the night, in the next 6 hours, 56 minutes the time of sun-setting, and lastly 9 hours 18 minutes the time when twilight ends. and thus you may proceed at any other time, onely take notice that if you be removed far from the Latitude for which these Tables were Calculated, either north, or south, you will find some error in them.

Pond 1674.

Of the Eclipses this year.

THere will be 3 Eclipses this year, viz. 3 of the Sun, and 1 of the Moon, whereof those of the Moon onely will be visible to us in *England*.

The first will be the 12 of Jan. 23 min. past 5 in the mon. at which time (if clouds hinder not) the Moon may be seen in the west almost totally Eclipsed.

The 2 will be the 7 of July, 40 min. past 8 at night, at which time the Moon may be seen in the South-east almost totally Eclipsed, the beginning of this Eclipse will be before the Moon Ascends our Horizon, but the middle, and end of it may well be observed with us.

Such as delight in Coelestial observations, may this year take notice of a famous Conjunction of Saturn & Mars, it happens the 8 of July 36 min. past 7 at night, and at 5 min. past 1 at night (if clouds hinder not) they may be seen to rise very near together in the East, as if Mars Eclipsed Saturn.

Some short rules for Husbandmen and Gardiners.

Set and transplant young Trees and Quicksets every New moon, from Novem. till Feb. in the same months also Prune and nail up wall fruit, and dig and dung your ground against the Spring; sow, set, and cut such things as you would have to grow, or bear fruit quickly, in the New Mo; if it may conveniently be done, on the contrary such things as you would have to grow slowly or not at all, cut or pluck them up in the wane of the Moon, at which time also Fell Timber, sow round seeds and such seeds as produce round roots about the Full Moon. sow hardy seeds and pot. herbs in Feb. if the weather be mild, but tender seeds not till after the cold winds and frosts are over, gather such fruit and seed as you intend to keep about the Full Moon, in a fair day. Graff at the latter end of Feb. or in March in mild weather.

Pond 1674.

A Table whereby you may find the Golden Number, Epact, Cycle of the Sun, and Dominicall Letter, for 28 years to come, and from thence Easter day.

Year of our Lor.	Gold N.	Epact	Cycle of Sun	Domin. Letter.	Leap year.	Easter day

1699	9	9	28	A		9
1700	10	20	1	G	F	March 31

THE former Table is so easie, it needs no explanation, for find but the year of our Lord in the first Column, and right against the same, (under the respective Titles) you may find whatsoever is contained in the Table, wherefore I shall onely give an account from whence those numbers do arise.

The Golden Number is nothing but a periodical Revolution of 19 years; in which time the ancient Astronomers were of opinion that all the Conjunctions and Aspects, of the Sun and Moon, did return to the same place in the Zodiack which they were at 19 years before, but this is not exactly true, this Circle is called *Decemnovenalis Circulus*, also called the Golden Number from its excellent use, and because it was written in the Kalender with letters of Gold.

The Epact (never exceeding 30) riseth from the excess of the Common Solar-year, above the Common Lunar-year, the one containing 365 days, and the other but 354; from which difference (being 11 days) cometh the Epact, which is added to the Lunar-year to make them equal.

The Cycle of the Sun is a Revolutiōnal number of 28 years, in which space of time there is a perfect change of all the Sunday-Letters; so as this Circle was invented not to shew any changes in the Suns motion, but to find thereby the Sunday-Letter for any year proposed.

The Sunday-Letter is always one of these seven, A B C D E F G, it sheweth Sunday, or the day of the Sun all the year, but herein observe that in the Bissextile or Leap-years there are two Sunday-Letters, whereof the

Pond 1674.

first is to be accounted the Sunday-Letter, from the first of *January*, to the 24 of *February*, or Eve of *Saint Matthias*, and the other from thence to the end of the year.

The Feast of *Easter*, according to the command of God, was celebrated by the children of *Israel*, upon the 14 day of the first moneth *Nisan*, in the Evening, the beginning of which Moneth was from the New Moon next following the Vernal Equinox; but it is not kept by the Christian Church in the 14 Moon, but on the Lords day following the same, and the Bounds or Limits of *Easter*, (as it is observed by the English Church) are from *March 22*, to *April 25* inclusive; so that it never falls sooner then the 22 of *March*, nor later then the 25 of *April*; the reasons are first, *Easter* can never be celebrated on the 21 of *March*, because that is the supposed day of the Equinox, so that the Full Moon in the moneth *Nisan* cannot fall before that time; therefore the next Lords day cannot be sooner then *March 22*.

As for the later Bound, viz. *April 25*, it is to be noted that the Full Moon in *Nisan* cannot happen later, then when the 14 Moon of the Moneth *Adar* falleth on the 20 of *March*, to which if an intire moneth of 29 days be added, the last Full Moon in *Nisan* will fall *April 18*; and because that day may be Sunday, a whole week more is to be added, which may extend to *April 25* inclusive.
